AI USAGE LOG: PHASE 2

CSE 5335 Web Data Management, Fall 2026. SolCacao project.

Student 3: Catalog, Cart and Sampler. Name: Venkata Pavan Ganesh Pallothu . Student ID: 1002314854

Tool: Claude (Anthropic). Claude explained the steps and drafted code. I applied every change in VS Code, ran the tests, and made all 6 commits and PR #85 myself from my own GitHub account (pavan-1299).

#	Date	Scope	AI Assistance	Human Verification
S3-1	Oct 25, 2026	Planning	Compared the team plan with the dev branch and found that stock states were missing.	Checked the list against the Phase 2 brief and chose stock states as my task.
S3-2	Oct 26 2026	Stock helper and data	Drafted stockStatus() in lib/stock.ts, its 4 tests, and a stock value per product.	Fixed a pasting mistake in the test file. pnpm test -- stock: 4 passed.
S3-3	Oct 27, 2026	Shop cards and product page	Drafted StockBadge.tsx, the card and product page changes, and the English and Spanish text.	Checked the shop and product pages in both languages in the browser.
S3-4	Oct 28, 2026	Cart and sampler	Drafted the stock limit in the cart and drawer, and the blocked sampler tile.	Checked the cart stops at 6 for Venezuela and the sold out tile cannot be picked. Cart and sampler tests passed.
S3-5	Oct 28, 2026	Git and testing	Gave the git steps, and read the test output: my tests passed, and 9 failures came from another file.	Ran every git command myself, opened and merged PR #85, and reported the other failures to the team.
S3-6	Oct 28, 2026	Reports	Drafted the report sections and calculated contrast ratios.	Checked each claim against what I ran. Checks I did not run are marked "not tested".
